In virtually every business, a computer is an essential tool for running the day-to-day operations, enhancing productivity and communicating with customers, suppliers and the public. Managers use computers for a variety of reasons, including keeping their teams on track, budgeting and planning projects, monitoring inventory and preparing documents, proposals and presentations.

Uses of Computers in Management | Bizfluent

Computers play a central role in a business's management information system, or MIS. In past decades, most companies had a few computers that served as information hubs. Today, a range of computing devices funnel important data from a variety of sources, from sales to time cards to inventory. The MIS software gathers the data and generates actionable information to guide the business.

Application software is a program or group of programs designed for end users. Examples of an application include a word processor, a spreadsheet, an accounting application, a web browser, an email client, a media player, a file viewer, simulators, a console game or a photo editor. The collective noun application software refers to all applications collectively. This contrasts with system software, which is mainly involved with running the computer. Applications may be bundled with the computer
