Honeybee Veterinary Medicine: Apis Mellifera L ...

The European honey bee (*Apis mellifera*) has the unusual status of being an inherently wild species from which a natural foodstuff (honey) is derived by manipulating its behaviour to deposit this in man-made wooden frames. Bees also produce propolis and Royal Jelly which can be harvested but their mo ...

Background: Honey bee (*Apis mellifera*) is a very important species for human beings, animals, environmental biodiversity, crop production and economic sustainability in Europe and worldwide. This study investigates whether future veterinarians are trained to deal with the particular needs of the only traditional food-producing insect in Europe.

Mapping the teaching of honeybee veterinary medicine in

...

Honeybees are an essential part of farming, as well as the wider ecosystem. Since the middle of the 1990s, bee populations around the world have suffered dramatic decline through diseases, intoxication, and unknown causes. Veterinarians have had little training in bee health, but, as the situation continues, qualified animal health professionals and, in particular,
